INSTALLING THE LEARNLINK SECURITY CERTIFICATE (IOS DEVICES)

Apple iOS devices – iPhones / iPads / iPod Touch

FS70-417   Version: 1.0   Last Modified: June 2012

The LearnLink solution has been designed with a security focus, this includes encrypting data across elements of the DECD environment. To do this, devices within schools and preschools need to install a security certificate called **SAEDU Certificate Authority Root Certificate (SAEDURootCA)**.

This Fact Sheet documents the steps required to manually install the LearnLink security certificate on an iPhone, iPad or iPod Touch. If you already use configuration profiles you can simply add the SAEDU Root CA certificate to your current profiles.

1. Connect the iOS device to the Internet.
   Either an internal school WiFi connection or an external 3G mobile connection will work.

2. Open Safari

3. Enter http://ca.schools.sa.edu.au/ into the address bar and **Go**.
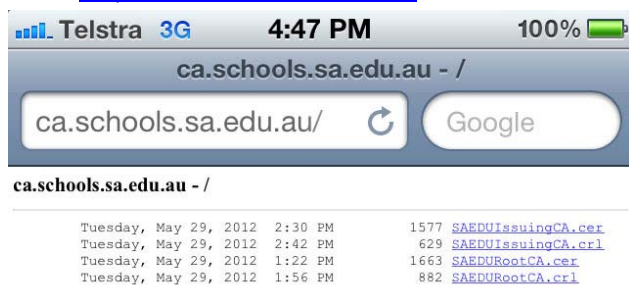

4. Select the **SAEDURootCA.cer** link

---

5. Press the **Install** button

6. Press the **Install** button

7. Enter the device **Passcode**
    If you have a Passcode set on the device you will be prompted to provide it.

8. Press **Done**.

NOTE: If the certificate isn't installed correctly you will receive certificate warnings when browsing some websites via the LearnLink web filtering service.
